Perception, decision and action in one agent session

OpenCV 5 measures every re-recorded candidate; that measurement decides the agent's next edit, its next tool call and when to stop.

RECORDED SESSION V6P01 · 16 OCTOBER 2026

0–7 min
prepare: reference and baseline measured

13 → 24 min
candidate 01: calibration error 0.0244

25–33 min
agent reads lag, tracks glyphs, fits latency

33 min
probe on three chosen cases

36 → 48 min
candidate 02: calibration error 0.0067

49 min
sealed; held-out 55/56, one regression caught

HUMAN CONTROL

- Author pre-registers thresholds
- Author approves every run
- Guard checks every tool call
- Native audit of agent logs
- Results never rewritten
